

dotStore - The Connected Online Store for Microsoft Great Plains

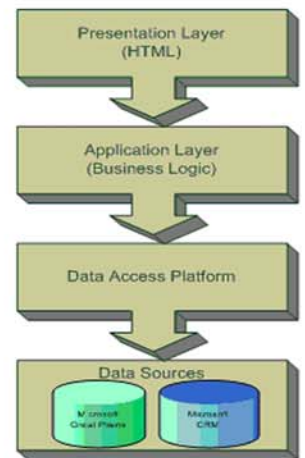

www.itdp-solutions.com

Web Design – made easy:

dotStore is multi-layered store, giving the web designer complete flexibility on how the store is rendered without compromising the integrity of the underlying business logic of the store. This not only makes the web designer's job much easier it means that the store front can be changed and redesigned without the overhead of changing any of the business logic or data layer's components.

Easy Upgrade:

Because dotStore is multi-layered, upgrades are seamless. If you upgrade Microsoft Great Plains or dotStore, you upgrade the relevant component which means that you do not need to reapply the store design to the upgraded version.

dotStore is built on Microsoft .NET and mobile technology.

The Mobile Store:

2005 is called the year of mobility as organizations large and small are set to get maximum productivity within the organization as well as increase customer responsiveness. dotStore mobility expands the business platform of revenue generation by allowing the sales person on the road to place orders on behalf of the customer as well as check customer information and status of activity.
